Atty. Docket No.: P71118US0 Application No.: 10/568,072

AMENDMENTS TO THE CLAIMS

1. (Currently amended) A two-pack curable composition for use in an automobile manufacturing line comprising

plastisol liquid A which contains a thermoplastic resin selected from the group consisting of polyvinyl chloride, vinyl chloride-vinyl acetate copolymers, coreshell type acrylic resins and gradient type acrylic resins, and a plasticizer, and

liquid B which contains a gelling agent selected from the group consisting of plasticizers, high-boiling solvents, organic solvents and monomers of thermoplastic resins, wherein said composition gels at room temperature on mixing liquid A and liquid B.

- 2. (Previously presented) A two-pack curable composition for use in an automobile manufacturing line according to claim 1, wherein liquid B contains a component which dissolves or swells the thermoplastic resin in liquid A.
- 3.- 6. (Cancelled).
- 7. (Previously presented) A two-pack curable composition for use in an automobile manufacturing line according to

Atty. Docket No.: P71118US0 Application No.: 10/568,072

claim 1, further comprising a thermosetting resin and a latent curing agent thereof.

8. (Previously presented) A two-pack curable composition for use in an automobile manufacturing line according to claim 7, wherein the thermosetting resin is an epoxy resin.

9. (Cancelled).

- 10. (Previously presented) A two-pack curable composition for use in an automobile manufacturing line according to claim 1, wherein the gelling time of the mixture of liquids A and B is from 30 seconds to 60 minutes at room temperature after mixing.
- 11. (Previously presented) A two-pack curable composition for use in an automobile manufacturing line according to claim 1, wherein the mixture of liquids A and B has a sprayable viscosity, and gels within a period of time from 30 seconds to 60 minutes at room temperature after application.
- 12. (Previously presented) A two-pack curable composition for use in an automobile manufacturing line according to

Atty. Docket No.: P71118US0 Application No.: 10/568,072

claim 1, which compounds 50 to 150 parts by weight of the gelling agent per 100 parts by weight of the thermoplastic resin.

- 13. (Previously presented) A two-pack curable composition for use in an automobile manufacturing line according to claim 1, wherein the mixture of liquids A and B has a viscosity of 50 to 200 Pas (at 20°C).
- 14. (Previously presented) A process for sealing automobile body parts comprising the steps of

applying, as a body or seam sealer in an automobile manufacturing line, a two-pack curable composition according to claim 1 to automobile body parts assembled by spot-welding, the parts having been press molded in a body-welding step of an automobile manufacturing line and

passing said assembled automobile body parts through a coating step and an assembling step while said curable composition is in a gelled state.

15. (Previously presented) A process for coating an automobile body part comprising the steps of

applying, as an underbody coating in an automobile manufacturing line, a two-pack curable composition

Atty. Docket No.: P71118US0 Application No.: 10/568,072

according to claim 1 to the automobile body parts assembled by spot-welding, the parts having been press molded in a body-welding step of an automobile manufacturing line and

passing said assembled automobile body parts through a coating step and an assembling step while the composition is in a gelled state.

16. (Previously presented) A process for bonding automobile body parts comprising the steps of

automobile applying, adhesive in as an an manufacturing line, two-pack curable composition а according to claim 1, to the automobile body parts having been press molded in a body-welding step of an automobile manufacturing line and

gelling said curable composition, whereby the deformation of the adhesive is prevented in subsequent treating steps.
